*A unique, reliable & patented technology*

The Coverseal brand was aroused from a desire to bring an equally aesthetic and high-performing solution to a demanding clientele. Originating from the world of industry and more precisely, fast-opening flexible doors, this technology has been adapted to the specific, highly demanding swimming pool setting. The exclusive, patented Coverseal system comprises a unique mechanism that allows the membrane to unroll and lock in place courtesy of an extra-flat, extremely discreet, 10 mm thick rail. The membrane was developed for top resistance to UV rays, extreme climatic conditions and the most exacting standards, particularly NF P90-308 of December 2013.

## The benefits of Coverseal

### Safety

Our Coverseal covers comply with the most exacting safety standards, particularly the NF P90-308 of December 2013. The great care given to selecting the materials used and an exclusive locking system enable your pool to be made safe effectively, regardless of your basin's size and shape. The high resilience of the Serge Ferrari pre-stressed PVC membrane means that it will bear the weight of one or a number of persons, particularly your children and pets.

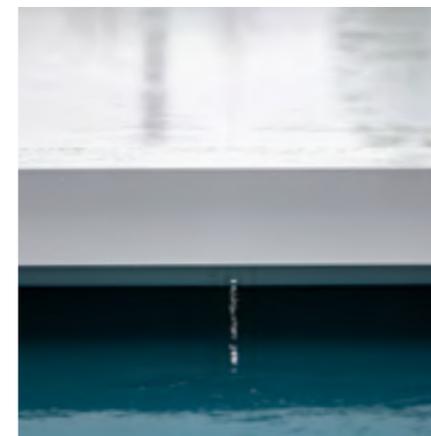

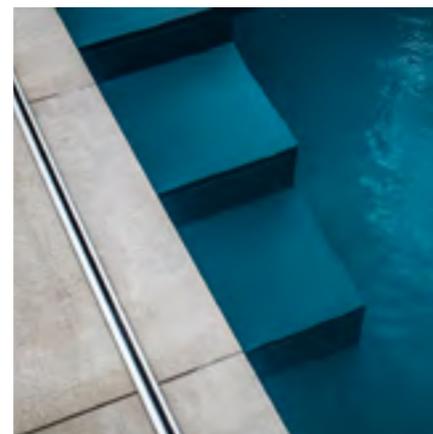

### Water Quality

The quality of the selected materials, especially as concerns the membrane and the watertightness brought about by our patented locking system, guarantees you clearer, cleaner water.

Staying perfectly taut in all circumstances, our membrane will stop leaves falling into your pool, for example.

It will also pronouncedly reduce photosynthesis, and, as a consequence, the build-up of algae.

Your pool's pH indicators will then remain more stable while considerably diminishing the use of chemical water treatment products.

### Insulation

Energy costs and the desire to better safeguard the environment are additional reasons for choosing a 4 season Coverseal pool cover.

The Coverseal during the day, the sun's rays will warm up the cover and the water in the pool courtesy of radiation transfer.

The pool will therefore accumulate heat.

At night, the cover will totally block evaporation, which will prevent the water from cooling. This will ensure immediate savings in both water and energy. During colder periods, our cover will also limit frost formation, providing better protection for your basin and pool equipment during overwintering.

### Unobtrusiveness

Elegance is not automatically synonymous with making pools safe or covering them.

Our Coverseal swimming pool covers have been developed with a precise aim: to make your pool safe without cluttering its environment.

Its minimalist design as well as the countless color combinations will allow you to blend the cover into the landscape or, on the contrary, to make it a decorative object in the same way as your outdoor furniture.

### Convenience of use

One of the numerous advantages of our Coverseal covers is that the area taken up by the pool is optimised in both summer and winter.

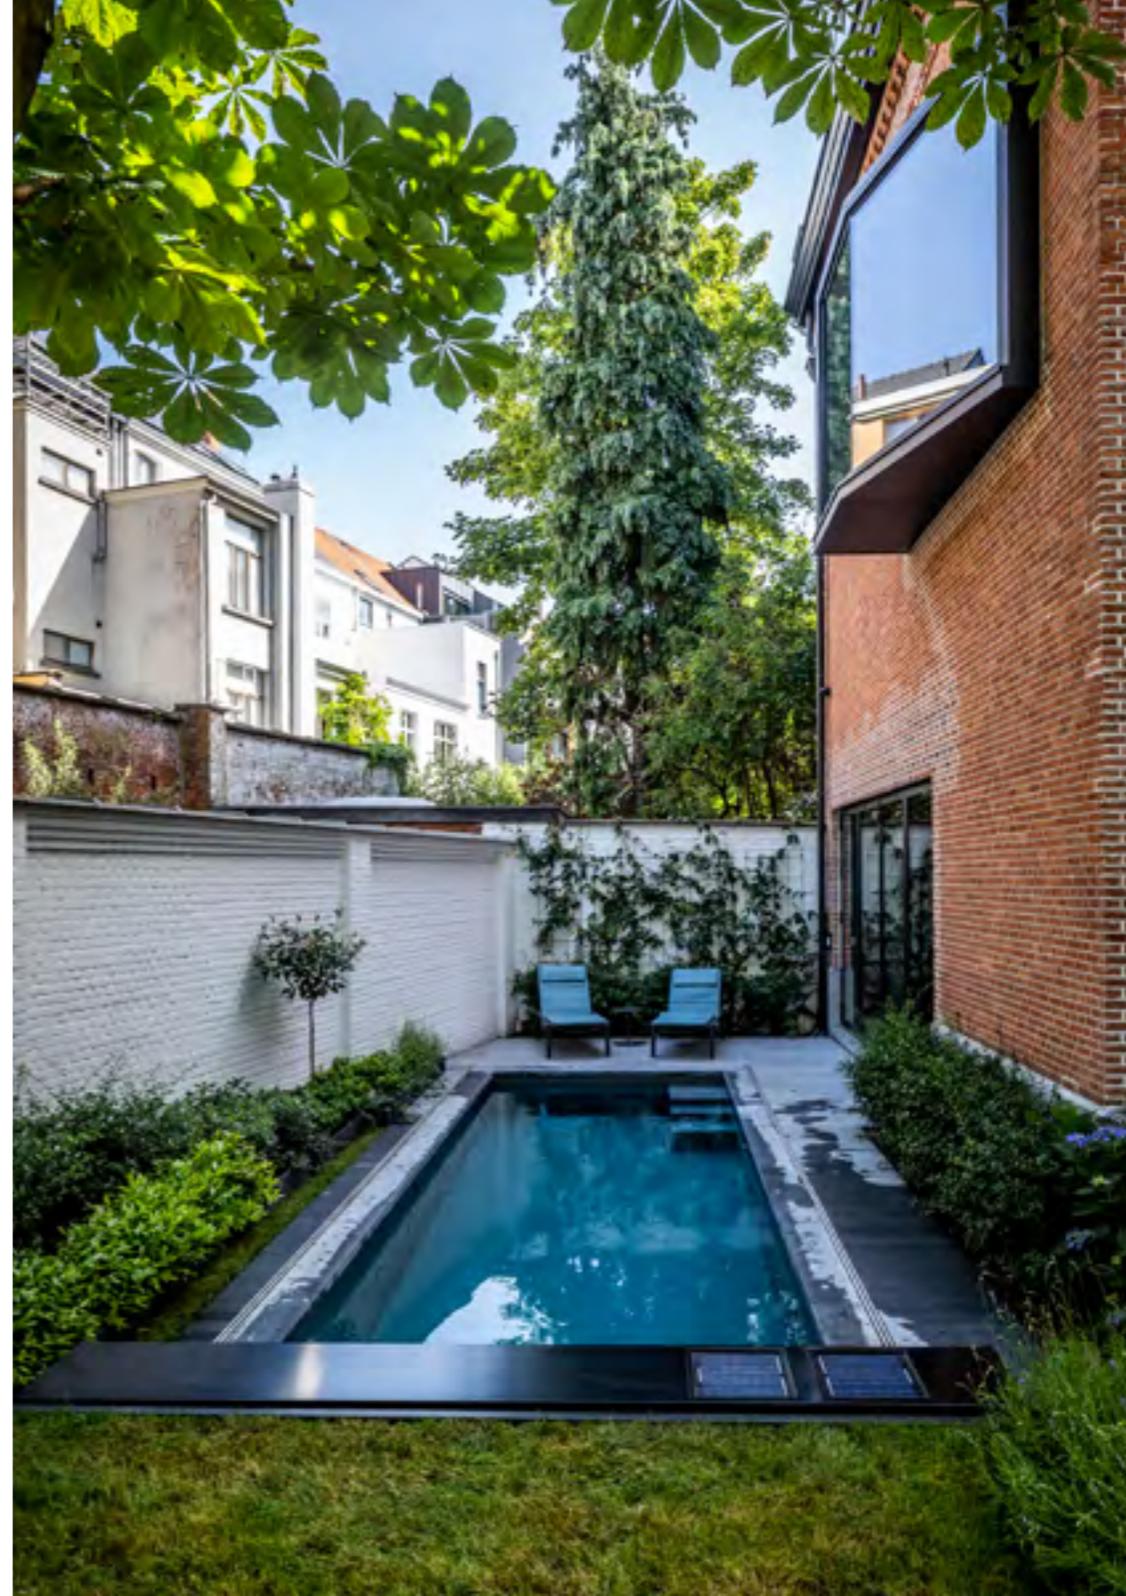

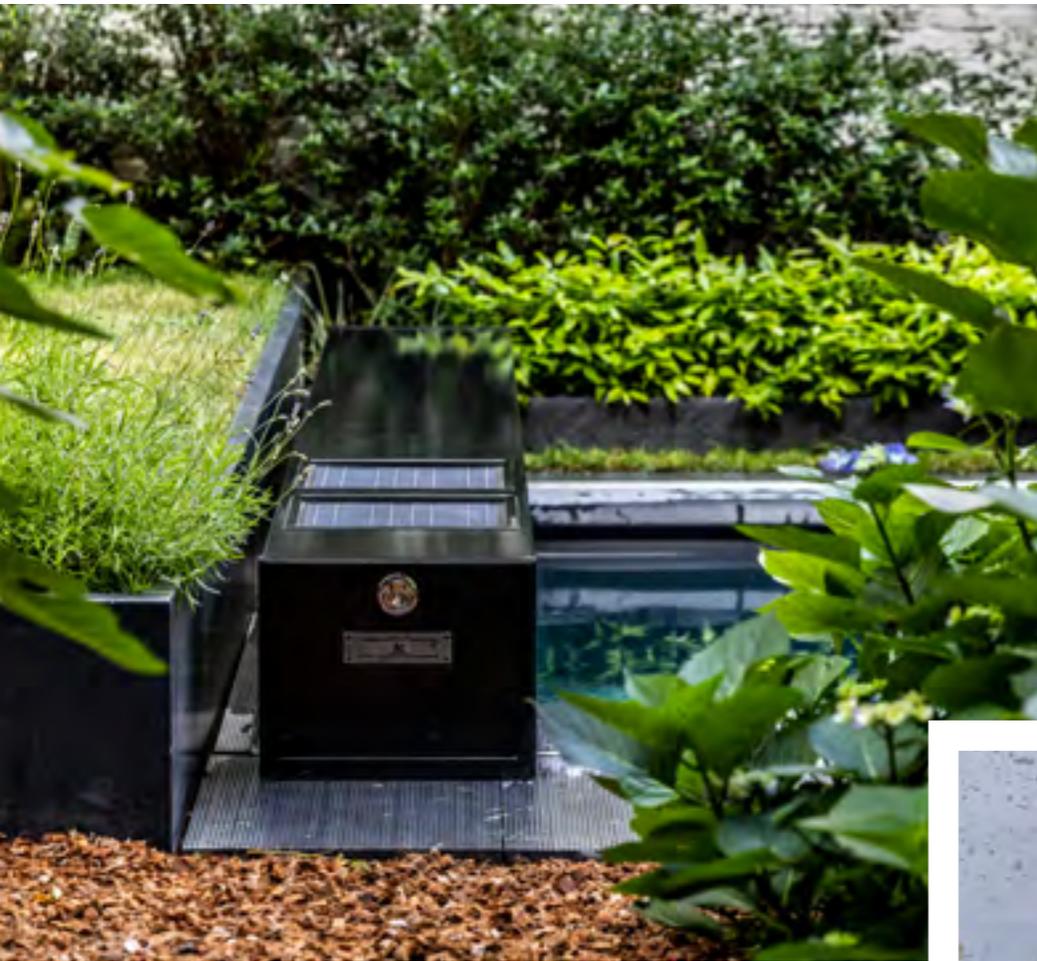

Unlike other "all-season" products (pool shelters, for example) the clearance area is strongly reduced.

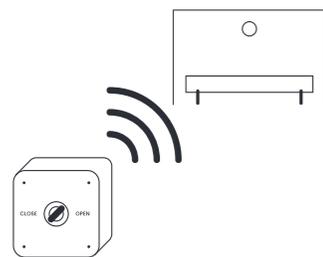

Its ease and swiftness of opening are likewise major bonuses of this uniquely performing cover.

Automatic

The “Automatic” model is the crown of our range, combining technology, aesthetics and respect for the environment.

Actuated by a wired or wireless control unit (with the pool kept in sight), it will provide you with optimum convenience and allow you to uncover or make your pool safe in less than one minute.

The batteries are supplied by photovoltaic panels fully incorporated into the casing, which makes this cover totally autonomous.

This cover is **chosen by demanding customers who refuse to compromise between aesthetics and performance.**

Semi-Automatic

The “Semi-Automatic” model is characterised by a control unit equipped with batteries that can be charged on your domestic electrical supply within hours.

Once this unit is charged, a couple of dozen opening/closing cycles are possible.

Should you forget to recharge the control unit, manual opening is always an option...

This model is **the perfect compromise for those seeking a high performing cover at the right price.**

Manual

The “Manual” model is **the ideal solution for pool owners who wish to make the most of all the advantages of a Coverseal on a tighter budget.**

Actuated by a single person courtesy of a ratchet key, it allows you to guarantee maximum safety for your loved ones but also to keep your water cleaner and warmer, as do our “Semi-Automatic” and “Automatic” models.

### A tailor-made and customizable cover

A range of colors for the membrane allows our cover to integrate perfectly and discreetly into the environment of your swimming pool. On the casing side, you will also have the choice of the color of the powder-coated aluminum box, here again it is a unique product that will meet your every expectation and desire.
